

Business Administration – Supply Chain Management, B.S.

ind.tc/child-development-bs

A Bachelor of Science in Business Administration concentrating in supply chain management (SCM) will help you develop a comprehensive understanding of the global supply chain as well as the skills needed to implement strategic, efficient and effective SCM practices in a contemporary business setting.

Student Learning Outcomes

Upon completion of this degree, you will be able to:

- Explain the role of supply chain management and explain the trends and challenges in today's business environment
- Apply current supply chain theory, practices and concepts
- Develop critical thinking skills through the application of computer-based supply chain optimization tools, including linear program modeling and sensitivity testing
- Use effective written and oral communications, team building skills and presentation skills to examine and discuss business problems
